

Moodle - CAPS

Moodle is the learning management system used at Bethel University to deliver course materials via the web. All course syllabi and other documents will be posted there, along with assignment grades, faculty information, and group email. Syllabi and course information will be posted online two weeks prior to each class. You will have access to Moodle once you set up your Bethel computer account. Access these systems via the Moodle icon at [My.Bethel](#). A help desk is available through [Teaching and Learning Technology](#), to answer your questions. Other helpful information about Moodle is available on the [Moodle Confluence page](#), including student tutorials in video format.
