

Moodle - CAPS

Moodle is the learning management system used at Bethel University to deliver course materials via the web. All course syllabi and other documents will be posted there, along with assignment grades, faculty information, and group email.

Courses are not permanently active in Moodle; therefore, it is highly recommended for students to save their information from individual classes in a separate place.

Syllabi and course information will be posted online two weeks prior to each class. You will have access to Moodle once you set up your Bethel computer account. Access Moodle under the Tools and Resources section of [MyBethel](#). The ITS Help Desk can provide assistance on Moodle-related questions. Other helpful information about Moodle is available on the [in Confluence](#), including student tutorials in video format.
