

Wi-Fi and Network

Networks at Bethel

Bethel: This is our primary wireless network at Bethel. You will need to be an active Student, Staff, or Faculty in order to login with your account username and password.

Bethel eduroam: This is a "network" that our Bethel provided Windows laptops will connect to automatically without a username/password. It will only appear on these devices.

Bethel Guest: This is the guest/open network on campus. When this network is selected from a device a splash screen will appear (similar to connecting at an airport, coffee shop, or hotel). Use this network if you are a visitor of Bethel or are using a device that is not 802.1x capable. Not all devices can authenticate to Bethel-Guest on their own. Devices like Roku, Smart TVs, Game Consoles, and Fire Sticks will need to be registered first before connecting to this network. Instructions can be found here: [Register Devices](#).

Ethernet: This is a direct connection to our network using an Ethernet cable from a wall port or VoIP desk phone to the computer. For Dorm Port Activations see this confluence article: <https://confluence.bethel.edu/x/H4A2>
